Certified Phlebotomy & EKG Technician (120 hours)

*WIA APPROVED COURSE

Phlebotomy & EKG Technicians are projected by the Bureau of Labor Statistics to have over a 16% growth from 2008-2018.

Course Description

A Phlebotomy Technician (Phlebotomist) is an integral member of the medical laboratory team whose primary function is the collection of blood samples from patients by venipuncture or micro techniques. The Phlebotomy Technician facilitates the collection and transportation of laboratory specimens, and is often the patient’s only contact with the medical laboratory. The need to assure quality and patient safety mandates strict professional behavior and standards of practice for Phlebotomists.

This program’s curriculum includes the correct and accurate obtaining of an EKG tracing and cardiac monitoring. It also consists of classroom and simulated laboratory settings. Students will practice their techniques in the clinical setting of the classroom. Students must demonstrate successful specimen collection with venipunctures, skin punctures, and EKG tracings.

After successful completion of the program, students have the necessary skills to draw blood from patients or donors in hospitals, blood banks, clinics, doctor offices, laboratories or a similar facility for medical purposes.
